SUBJECT: LETTER OF APPRECIATION — POLICY REPORT ON THE SINDH SOLAR ENERGY PROJECT (SSEP)

Dear Sir / Madam,

I am writing to formally place on record my appreciation for the report prepared by SolarPak Impact Labs titled "Sindh Solar Energy Project (SSEP): Implementation Review and Policy Assessment." The report has been reviewed, and I wish to convey the following observations.

2. The report is well researched and properly sourced. It draws on the World Bank's Project Appraisal Document, successive Implementation Status and Results Reports, the Implementation Completion and Results Report of February 2026, Auditor-General accounts, and relevant Senate and Sindh cabinet proceedings. The report is careful to distinguish between verified findings and matters that remain under investigation, particularly in its treatment of procurement irregularities, which reflects sound analytical discipline.

3. The findings recorded are material and merit attention at the provincial level. In particular, the report notes that utility-scale solar generation reached only 7.5% of its 420 MW target, and that household electrification reached 26.8% of its 200,000-household target, against a US$100 million credit. It further observes that approximately 42% of total disbursement occurred within the final seven months of a seven-year project, which the report attributes to institutional rather than technical shortcomings. The report's conclusion that project outcomes cannot be reliably assessed, owing to the household energy survey and social audit not having been completed as originally required, is a finding this office considers significant.

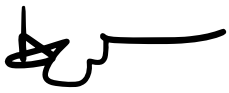

4. The report's review of comparable programmes in Bangladesh, Kenya, and South Africa, and the recommendations drawn from them regarding performance-linked payment, private-sector market development, and data-led technology selection, are considered relevant to the design of future provincial solar initiatives.

5. It is noted that this report was prepared independently of the ongoing Senate Standing Committee and Sindh cabinet inquiries into aspects of the project's implementation, using publicly available records, and that its conclusions are broadly consistent with the concerns raised in those proceedings.

6. This office will give due consideration to the findings and recommendations of this report in the course of its legislative and oversight responsibilities, and encourages SolarPak Impact Labs to continue this line of policy research.

Please accept my appreciation for the effort undertaken in preparing this report.

Yours sincerely,
