INTRODUCTION

In our first year, **April 2025 to May 2026**, SolarPak completed **24 installations**, changed **240+ lives**, and proved that young leaders can have a genuine impact on the world. As one of the world's **largest youth-led solar non-profit**, we are not only bringing electricity to communities living without power, but are demonstrating that genuine innovation, commitment, and energy belong to youth. This report is for donors, partners, and anyone who believes that young people are the solution.

WHO WE ARE

SolarPak is one of the world's largest youth-led solar non-profit, working to bring reliable energy access to underserved communities in rural Pakistan. We started because the problem was visible and the response was not. Load shedding is not an abstract policy failure in Pakistan; it is hours lost every day to darkness, heat, and economic standstill. We built SolarPak because we believed young people could do something about it.

We fund and install solar panels and fans in areas where grid power is absent or unreliable. Our team is entirely youth-run, operating across planning, outreach, and impact measurement. Every project is built with the belief that youth action can truly make a difference in the lives of the people who need it.

ABOUT US

MISSION

We aim to bring clean, affordable solar energy to families and communities across Pakistan.

VISION

Here at SolarPak we are building a world where everyone has enough energy to power their homes. One solar panel at a time.

VALUES

COMMUNITY-FIRST

- Solutions designed with communities, not for them
- Local hiring, local ownership, actual listening
- Slower but sustainable

LONG-TERM IMPACT

- Measure success and impact 10 years from now
- Quality and sustainability over short-term wins
- 10-year warranties, maintenance, career development

TRANSPARENCY

- Tell the truth about what works and what doesn't
- Full financial and impact tracking through data
- Real stories shown

YOUTH LEADERSHIP

- Young people actually lead
- Real decision making
- Real accountability

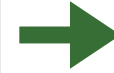

Fundraising and sponsorships

We cold call, email, and use connections to contact both large and small companies in order to secure funding

Community identification

Our on-ground team receives requests via text or through verbal communication. The team then meets with the beneficiaries to assess conditions and talk to the family. If they need a solar panel, then we follow through with the installation. On occasion we will reach out to areas where we feel as though there is a dire need for solar panels, such as the school installation

Procurement

The plates and batteries are supplied by Madinah Electric Solar Energy, and the fans and bulbs by Waheed Fan ACDC (Pakfan)

Local partnerships

Our on-ground team are freelance electricians, and we pay them salaries that are included in the labour costs

Installation

On-ground team then deploys the panels

Impact measurement

Impact Labs documents outcomes through interviews with people affected, writing articles about installations and impact, and by running data accuracy audits

Reporting and Amplification

Marketing publishes content on social media whilst Impact Labs publishes formal articles and the annual report

HOW SOLARPAK WORKS: OUR MODEL

OUR INSTALLATIONS

LOCATIONS ARE ALL IN KHAIRPUR, PAKISTAN:

02.

A LETTER FROM THE FOUNDER

DEAR FRIEND OF SOLARPAK,

I started this movement at 15 with modest savings from a small web development business I ran on the side: no institutional backing, no roadmap. The goal was straightforward: use whatever means I could access to make a tangible difference for families who needed it.

For the first two months, that was the whole operation: one installation a month for a family that needed it. Then came the question. Not “Can I actually keep doing this?”, but rather, “How do I make this bigger than just myself?” How do you scale a personal act of generosity into something structured, accountable, and built to last? That question was harder than it sounds. For a long stretch I was genuinely unsure if we would ever cross the line from informal to real, and actually have the impact I knew we were capable of. It kept me up for more nights than I would like to admit.

By the close of our first fiscal year, I can say with full confidence that we have not just done well. We have done incredibly well. SolarPak has completed 24 solar installations: 21 for individual families’ households and 3 for a school, reaching more than 240 people in underprivileged communities across rural Sindh, Pakistan.

The number 240 carries more weight than it appears on paper. Our impact has an umbrella effect on productivity, health, and livelihood that simply cannot be quantified.

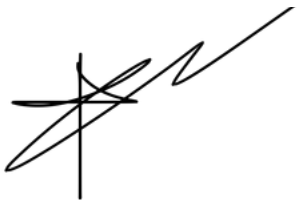

We raised over \$3,000 through events, social media, and community outreach, and built a working team of 16 youth leaders across dedicated functions, each with clear KPIs, accountability frameworks, and a shared vision. Every single one of these 16 people is working towards something bigger than themselves. That means the world to me.

Fiscal Year 1 was our birth. We made the transition from a small informal youth group to a recognisable organisation with a social media and events reach of over 100,000 people. Fiscal Year 2 marks something different entirely. This is the year we stop being recognisable and become the benchmark for youth-driven impact. We intend to redefine what a non-profit can actually be through sustainable, smart expansion. By the end of FY2 we aim to have completed over 50 installations with our reach expanding across multiple countries. As this letter is published, we are pioneering AI-powered KPI trackers and environmental and economic impact tools that will make SolarPak genuinely one of a kind, amplifying both our reach and our accountability. We are becoming digitally native, not as a trend, but as a commitment to the communities we serve.

Funding remains our honest constraint. What I can tell you, dear reader, is that we have already proven that youth-driven impact is entirely possible with the right structure and conviction. Our growth potential is exponential, and our confidence in reaching our goals has never been higher. We are building the standard for what it looks like when young people say no to convention and yes to responsibility.

Your support made this year possible. I hope you will stay with us for what comes next.

WITH GRATITUDE,

A stylized, handwritten signature in black ink, consisting of a vertical line intersected by a horizontal line, with a large, sweeping flourish extending from the top right.

AYAAN AHMED

03.

GOVERNANCE AND BOARD STRUCTURE

GOVERNANCE

The organisation is governed by a **five-member Decision-Making Council** that meets weekly without exception. All decisions including financial ones require a unanimous vote before anything is approved, ensuring no single person can unilaterally direct funds or strategy.

As **Chair**, Ayaan Ahmed sets strategic direction, manages donor relationships, and oversees day-to-day operations, while all major decisions revert to the full council.

We operate lean by design with no paid staff other than those on the ground, minimal overhead and the same collective approval standard applies to every rupee spent. This keeps us **transparent, accountable, and community-driven** at every level.

SOLARPAK'S DECISION-MAKING COUNCIL

SolarPak's decision-making council consists of five members:

CEO & Founder - Ayaan Ahmed

Head of Events and Community Outreach - Ayaan Omer

Head of Social Media and Marketing - Mohammad Murtaza

Head of Sales and Partnerships - Hamza Memon

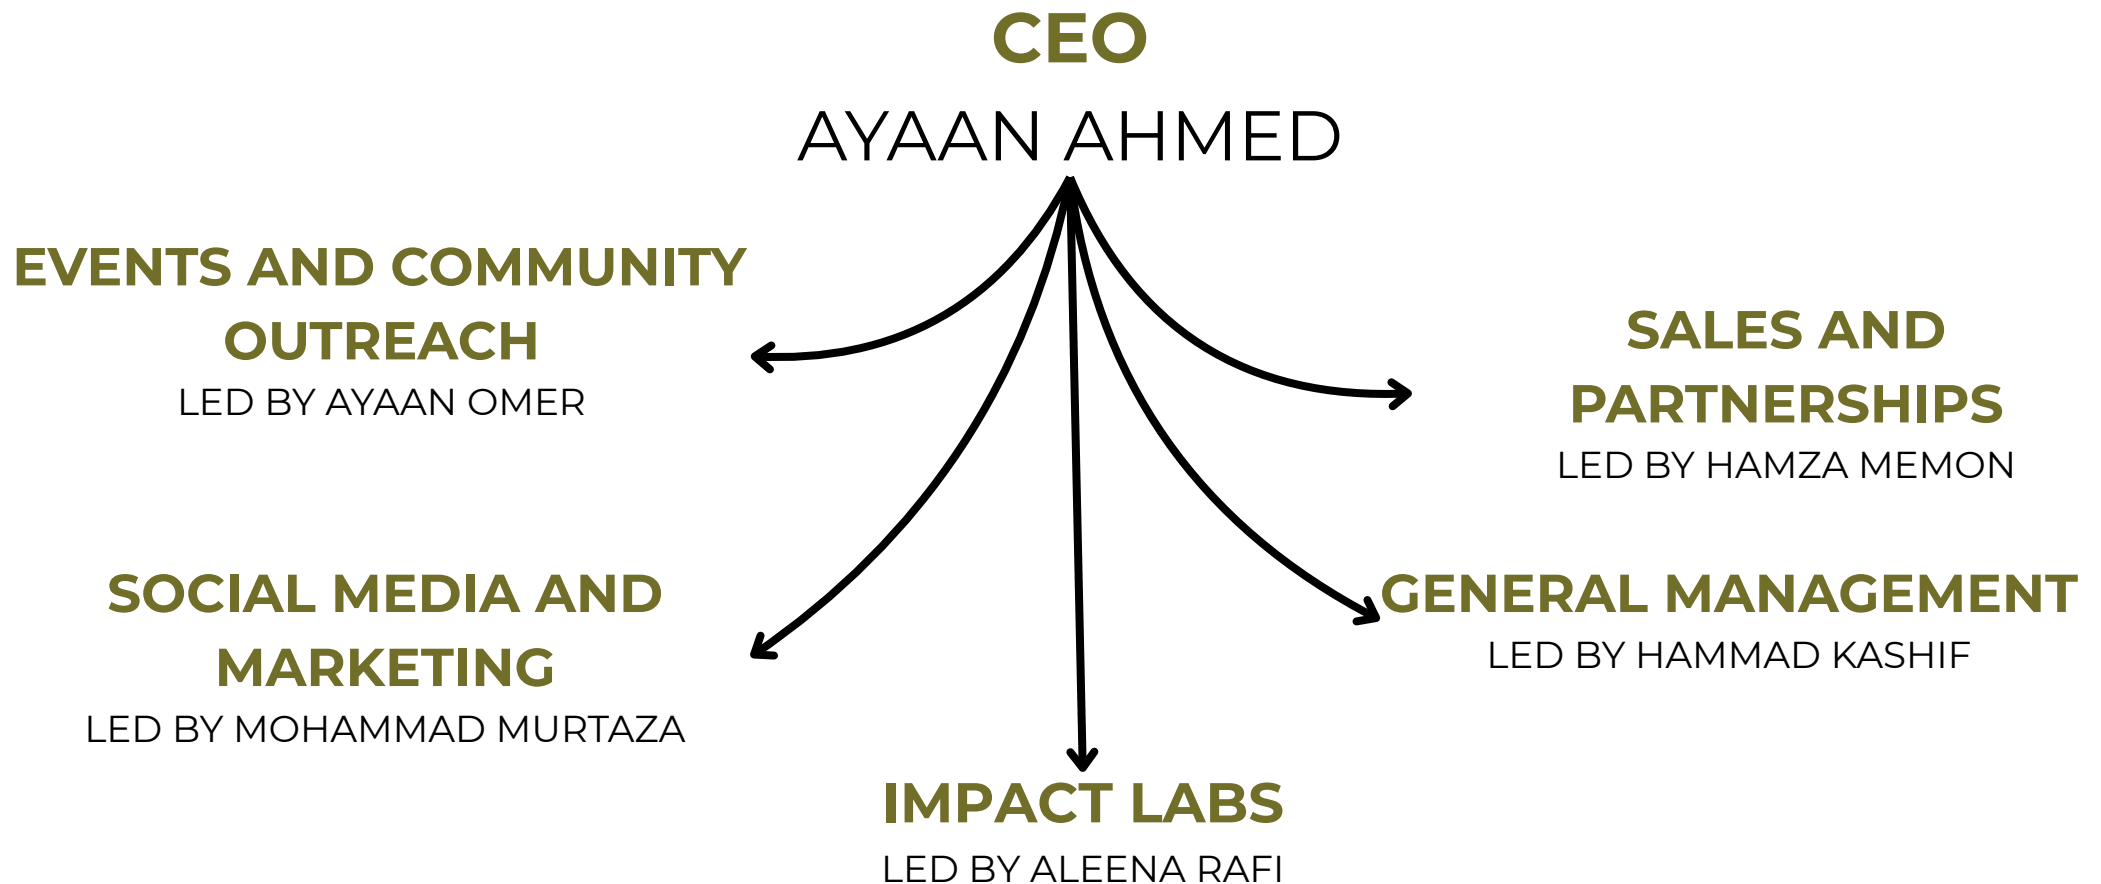

Head of General Management - Hammad Kashif

04.

TEAM REPORTS

THE ORGANISATION

KEY PERFORMANCE INDICATORS (KPI)

SolarPak's **first fiscal year** ran from **April 2025 to May 2026**. KPIs were introduced at SolarPak in March 2026 to effectively measure each team's progress towards their long-term goals. Each team report ends with a **3-year KPI framework**.

These are ambitious but achievable targets for the next three years, with Year 1 starting from June 2026 onwards. They represent what each team is committing to from now on.

They are **ambitious** because SolarPak is now scaling fast.

They are **achievable** because they are building on our progress from this first fiscal year.

EVENTS AND COMMUNITY OUTREACH

**HEAD
AYAAN OMER**

I'd like to begin by saying that I'm incredibly proud of the progress my team has made throughout the year. Since coming together, we've been able to produce meaningful and fruitful experiences. We've:

- Organised a stall raising **3,000 SAR** for our cause
- Organised a **second stall** that was approached differently from the first, which resulted in proportionally **higher interaction**
- Collaborated with the social media team to advertise our next event

TEAM REPORT

This obviously has not come without its own hardships. Our first stall was quite rushed, since we hadn't done much planning on what to offer, we were dealt a relatively bad card in terms of where the school had placed our stall, and we had a few issues with presentation, including one of our banners breaking and along with that we did not have a suitable table cover. Despite these issues, we persevered, which paid off in the end since we raised **3,000** SAR by the end of the day, which was, and still is, an astounding achievement, and I remember how elated me, **Salaar, Zaid, Adnan, and Ayaan** were to be able to do something like this. This experience taught me a very personal and valuable lesson: n your journey to achieve a goal, you are going to make mistakes There are going to be hurdles that need to be cleared. Since no one is perfect, not all of those hurdles are going to be cleared, and that's okay. The only thing that matters is the overall journey, and how we bounce back from any hardships. And that we absolutely did, before our stall for Earth Day, we discussed many ideas on how we can improve from our last experience, and even though we had an incredibly limited time window for our stall, since it took place during lunch time, our new ideas, including **a basketball 1v1, and a bakesale of homemade brownies and cookies**, enabled us to reach a large amount of people, and we had a higher number of people visiting our stall this time in comparison with our first stall, where all we were doing was selling lollipops. I feel as if we as the events team have made an amazing impact and I hope that in the future our reach will expand as we grow, and for that reason, I want to personally thank Zaid, Adnan, Salaar and Ayaan for dedicating effort, time, and resources to help make an impact, I cannot give enough thanks to express my gratitude for working alongside me to do something like this, and I hope to continue to make a meaningful impact with all of you. I hope that we as a collective will continue to improve on ourselves, and how we approach events in the future.

3 YEAR KPI FRAMEWORK

KPI	FY2	FY3	FY4
Events organised per year	3	7	15
Total event attendees	300	1000	3000
Avg. attendees per event	100	140	200
Post-event satisfaction score	4.0/5	4.3/5	4.5/5
Repeat attendee rate	15%	25%	35%
Events with a sponsor or partner	1	4	10

GENERAL MANAGEMENT

HEAD
HAMMAD KASHIF

My role this year has been serving as General Manager of SolarPak, with a focus on establishing the organisational foundations that will allow the initiative to grow in a way that is structured and sustainable. Leading a team of four divisions — Events, Social Media, Impact Labs, and Sales & Partnerships — has meant ensuring that each operates with a clear sense of purpose, defined responsibilities, and genuine accountability to the wider organisation. Coordination across these teams has been one of the more demanding aspects of the role, and one I have learned from considerably.

TEAM REPORT

A central priority this year was the transition of SolarPak out of its early, ideas-driven phase and into something more operationally grounded. That has meant **introducing KPI frameworks** suited to each team, establishing more consistent workflows, and shifting our internal culture toward one that values follow-through as much as ambition. Progress has not always been linear, but the shift in how our teams approach their work has been noticeable. There is now a stronger baseline of structure to build on.

Beyond the day-to-day responsibilities of general management, I have tried to keep our teams oriented around a longer-term picture. SolarPak exists to show that student-led organisations can contribute meaningfully to the renewable energy sector, and that conviction has shaped a number of the strategic decisions made this year, particularly around which opportunities we pursue and how we measure success. Rather than chasing volume, the focus has been on **building credibility**: through the quality of our partnerships, the rigour of our processes, and the consistency of our output.

Looking ahead, the groundwork laid this year puts SolarPak in a stronger position to take on more ambitious projects. The teams are more structured, the direction is clearer, and there is **a growing understanding across the organisation** of what it actually takes to deliver. That understanding, more than any single achievement, is what I am most proud of from this year. The role has required a significant amount of learning on the job, and the lessons from this year will directly shape how SolarPak is run going forward.

3 YEAR KPI FRAMEWORK

KPI	FY2	FY3	FY4
Active team members	22	40	70
Member retention rate	80%	85%	90%
OKR completion rate	70%	75%	80%
Probability achievement score	>70%	>75%	>80%
Worker satisfaction survey	≥90%	≥90%	≥90%

IMPACT LABS

HEAD
ALEENA RAFI

I am incredibly proud of the progress made by Impact Labs in the last few months- we have now written **three high-quality, authenticated and statistically backed reports: two co-authored publications exploring the current socio-economic environments in Pakistan and why SolarPak is needed, as well as one case study on SolarPak's March '26 school solar installation.** Moreover, we have written this **annual report** and will continue to do so in the coming years.

Through our articles, Impact Labs allows both those at SolarPak and our readers to truly understand the genuine need for solar energy and SolarPak in underserved areas of rural Pakistan.

I first joined SolarPak in January 2026, and started out writing articles about our projects myself. Since then, I interviewed and hired 2 new members of the team, Shuban Singh and Moiz Ali. With their help, Impact Labs has been growing massively.

TEAM REPORT

Impact Labs has also begun designing a **high-quality metric tracking dashboard**. When fully built, this dashboard will allow SolarPak to further improve transparency, as the **impact of each installation** will be **effectively recorded and publicised**. So far, our team has identified the most important economic and environmental metrics to measure, and used them to build the front-end design of the dashboard. We aim to finish the dashboard by mid-June.

As Impact Labs is a very new function, coherency and teamwork across the team is vital. We have had weekly meetings since our formation, and I am planning to increase that to two meetings a week. That is because we are adapting to our team's rapid progress. Our effective teamwork is most clearly demonstrated in our co-authored publications.

That they each received much higher AI ratings than our baseline (85%) demonstrates that we as a team are very efficient at working together to produce high-quality results. This teamwork will continue to benefit us in all of our future projects, whether that be more co-authored reports, research projects, or anything else.

There are a few key goals that I have for our team in the future. Firstly, I want us to connect with an external contact such as a university professor who can help us authenticate and improve our articles. I also hope that we can produce more in-depth, human-impact focused articles that focus on individual experiences of students, families, and more, in order to properly show the genuine changes driven by SolarPak.

3 YEAR KPI FRAMEWORK

KPI	FY2	FY3	FY4
Annual impact report published	1	1	1
Research articles published	8	8	8
Data accuracy audit score	85%	92%	97%
Report quality score (AI-assessed)	>85%	>90%	>95%
External citations/references	2	8	20

SOCIAL MEDIA AND MARKETING

**HEAD
MUHAMMAD IBRAHIM
MURTAZA**

My name is Muhammad Ibrahim Murtaza, and I am the head of Social Media for SolarPak.

Some of our significant achievements are:

- We were able to gain almost **100x more followers** than we had at the start of the social media team and SolarPak
- Just in the **last 3 months**, we were able to achieve **200k views**
- We were also able to establish a stable social media platform on Instagram

TEAM REPORT

I have worked for SolarPak since July 2025. We started with no members and only 20 followers across all platform. We have now grown the social media team to **4 dedicated members**, who I am very proud of, as they helped largely in contributing to our exponential growth across all platforms, at the start it was highly difficult to get our message and motive out to the world due to our small reach but we were able to overcome this by consistent posting and change of content.

It was also difficult to find some ways to vary content at the start and appeal to people, so we can gather donations and help the cause in Khairpur Mirs, Sindh. This has been a tough year, but I am very pleased with my team as we were collectively able to reach **2,000+ followers** across platforms (Instagram being the largest). We used many ways to promote ourselves, for example, the greatest proportion of posts occurred when we collaborated with the internal events team to make videos for the largest youth-led virtual hackathon in the world, and we had many videos/short films with over **10,000 views**.

In the coming years, our **goals** are to expand our following even more (up to **4,000**) and to also create short series to highlight the families that we have helped, and how we have helped them improve their quality of life. We also aim to increase our views and total outreach so we can get even more donations that we can put towards these needy families in rural Pakistan. This is because our mission revolves around zakat and giving back to the people who helped make Pakistan what it is today.

CHIEF VIDEO EDITOR
MEMBER OF SOCIAL MEDIA
AND MARKETING TEAM

EESHAL RIAZ

My journey at SolarPak started with a spontaneous collaboration. Ayaan, the founder, reached out to me after seeing my films on Instagram, which was my first project. The entire team at SolarPak loved it, and I was hired immediately. Ever since then, I've tried to **express feelings, emotions and speak thoughts with each film** I've created for SolarPak. I believe that visualisation is extremely important in order to make other people believe and contribute positively to our organisation. My films speak more than words could, and I will always stick to that. These people deserve to be heard and helped.

As the head of long-form content and video editing, I make sure to create content that speaks through the screens. It is important to have a vision, an idea and a story when I am creating something, we have multiple stories waiting to be heard, seen and helped. I love the work I get to do; it helps me improve and test my creativity. My experience at SolarPak has been incredible; everyone is cooperative and understanding. I wish to continue doing projects for SolarPak. I have the creative freedom to make my vision come into existence, and that's the best part about working here: I create what I feel and want to make the audience feel. **I believe everyone deserves to be heard and seen, and I make sure I do that through my films for SolarPak.**

3 YEAR KPI FRAMEWORK

KPI	FY2	FY3	FY4
Total Social Following	4000	6000	10000
Avg. Engagement Rate	2-4%	5-6%	8%+
Posts Published	12	12	12
Post to Video Ratio	2:1	1:1	1:2
Press/Media mentions	4	10	20

SALES AND PARTNERSHIPS

HEAD
HAMZA MEMON

This year was the first year of the Sales and Partnerships team, and since it was a completely new department, it had to be built from the beginning with guidance and support from the CEO. As the only member of the team, I was responsible for contacting companies, discussing sponsorship opportunities, and trying to create partnerships for upcoming events.

Even though the team is still small and developing, I am proud that I was able to secure **partnerships** with both a **licensing firm** and an **accounting firm** for upcoming events.

TEAM REPORT

Since I had never done this kind of work before, there was a lot to learn, and the CEO helped guide me on how to approach companies more professionally and how partnerships should be managed. That support helped me improve my communication skills and become more confident throughout the year. One of the hardest parts of this year was dealing with rejection because many companies either declined proposals or did not respond at all, which was disappointing at times. Since I was still learning, there were also many mistakes that I made during the process. Sometimes I could have been more organised, more confident, or better at following up with companies, but I think those mistakes helped me improve and understand how professional partnerships actually work. Instead of giving up after being rejected, I tried to learn from each experience and continue improving the way I approached companies. Since the department only started this year, these partnerships felt like important achievements and showed that the team has potential to grow further in the future. Looking ahead, one of the main goals is to **expand the Sales and Partnerships team by bringing in more members who can contribute new ideas and help improve the department.** I also want the team to become more **organised, professional, and consistent** in the way it communicates with companies. In the future, I hope we can create partnerships with businesses from different sectors, increase support for events, and help generate larger charitable revenues. Although this year was mostly about creating a foundation and learning from mistakes, I believe it was still an important first step for the future of the team.

3 YEAR KPI FRAMEWORK

KPI	FY2	FY3	FY4
Active institutional partners	1	3	6
Outreach meeting conversion rate	20%	30%	35%
Total Fundraising (USD)	\$10,000	\$20,000	\$40,000

CASE STUDY:

SOLARPAK SCHOOL INSTALLATION IN KHAIRPUR, PAKISTAN

BEFORE THE INSTALLATION

Before SolarPak's intervention, the rural school in Khairpur had operated without electricity for over five years after its generator stopped working. As Ustaad Abdul Hayy Bhatti explained, **“Five or six years ago we had a generator but it stopped working. Since then we’ve been working without any electricity.”** This meant the school had no fans, no artificial lighting, and no access to basic electrical tools or future educational technology.

The impact on learning was severe. In summer, temperatures could reach 45°C, making classrooms extremely difficult to use for sustained teaching and study. Students reported that the heat sometimes stopped them from attending school, with one saying, **“In summer sometimes it’s so hot I can’t go to school.”** Teachers also described how the heat reduced productivity, explaining that **“neither the students could learn properly nor the teachers could teach properly.”** The lack of electricity also limited the school day to natural daylight hours, leaving only around 6–7 hours of usable light.

CASE STUDY

DURING THE INSTALLATION

SolarPak installed a solar energy system designed to address the school's two most immediate barriers to learning: heat and visibility. The system included **three** solar panels with a **total energy capacity of 1.755kW** and an expected **efficiency level of 80%**. Its estimated daily output was around **6–8kWh**.

The installation was intended to power classroom fans, provide lighting, and create the possibility of future educational technology. This was not simply an upgrade to the building; it was a direct response to the conditions that had been preventing effective education. By restoring access to basic energy, SolarPak aimed to create a more stable and usable learning environment.

CASE STUDY

AFTER THE INSTALLATION

After the installation, the school moved from having 0kW energy capacity to 1.755kW, and from no estimated energy output to around 6–8kWh per day. Lighting can now be used as needed rather than being limited to daylight hours. It is estimated that classroom temperatures can now fall from up to 45°C to around 31°C as there are now fans for cooling.

Students expected the change to improve their ability to study. One explained, **“Solar will make it easier to study because of the fans which will keep us cool,”** while another said, **“It will help us because we can have fans and lights and we can study better.”** Teachers also expected teaching conditions to improve, with Ustaad Abdul Hayy Bhatti believing that the previous loss of productivity after break time **“will change inshallah.”** As of 12 March 2026, the installation had provided clean, sustainable electricity access to around 150 students.

SDG ALIGNMENT

SOLARPAK'S ALIGNMENT WITH THE UNITED NATIONS' GOALS

SDG 1: No Poverty

The solar installation supports education in an under-resourced rural community, helping students access better learning conditions that may improve long-term opportunities and reduce cycles of disadvantage.

SDG 4: Quality Education

The solar installation improves learning conditions by providing lighting and fans, making it easier for students to attend, concentrate, and study.

SDG 7: Affordable and Clean Energy

SolarPak provides clean, renewable electricity to multiple households that were using fossil fuels previously and a school that used to have no working electricity.

SDG 10: Reduced Inequalities

The project helps narrow the gap between under-resourced rural schools and better-equipped schools with electricity and technology.

SDG 13: Climate Action

SolarPak provides renewable solar energy instead of relying on fossil-fuel-based alternatives, supporting cleaner energy access and reducing the environmental impact of powering the school.

06.

FINANCIAL SUMMARY

WHERE MONEY CAME FROM

PKR 1,276,760

Total Revenue April 2025 - May 2026

- **Recurring High-Value Donations: PKR 766,360 (60%)**

From 2 committed individual donors

Range: PKR 50,000–100,000 per month

Directly contributed to majority of the 24 installations

- **Community Fundraising Events: PKR 280,720 (22%)**

Events, dinners, awareness campaigns

Grassroots support demonstrated

Examples: International Day Parade Fundraiser
(230,000 PKR raised)

- **Social Media Donations: PKR 140,360 (11%)**

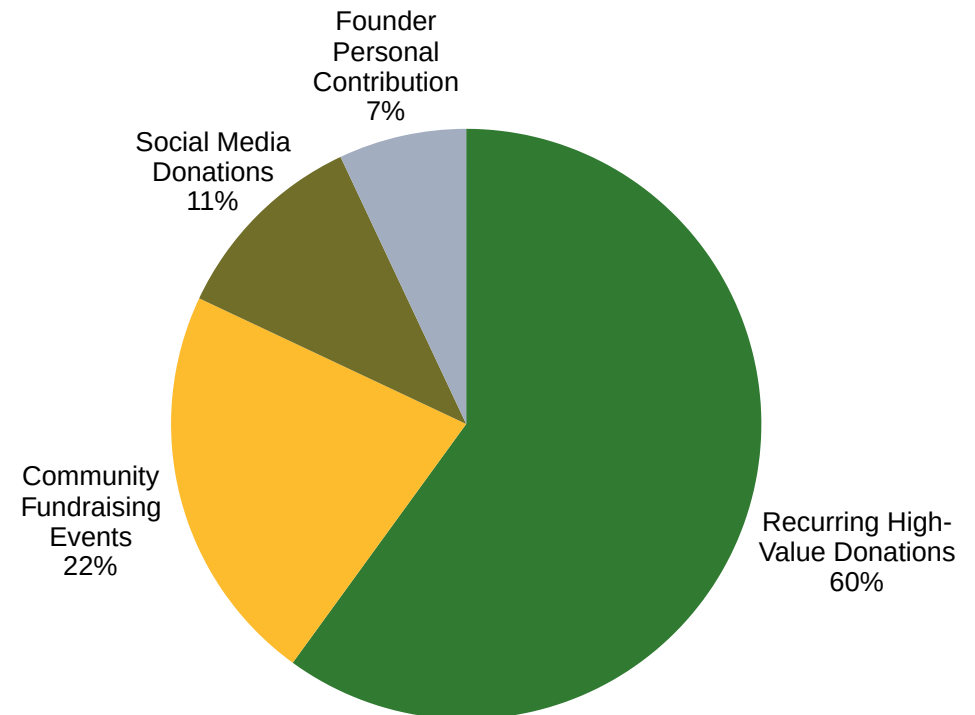

Facebook and Instagram campaigns

Growing community engagement

- **Founder Personal Contribution: PKR 89,320 (7%)**

Launch-phase commitment

Decreasing as revenue diversifies

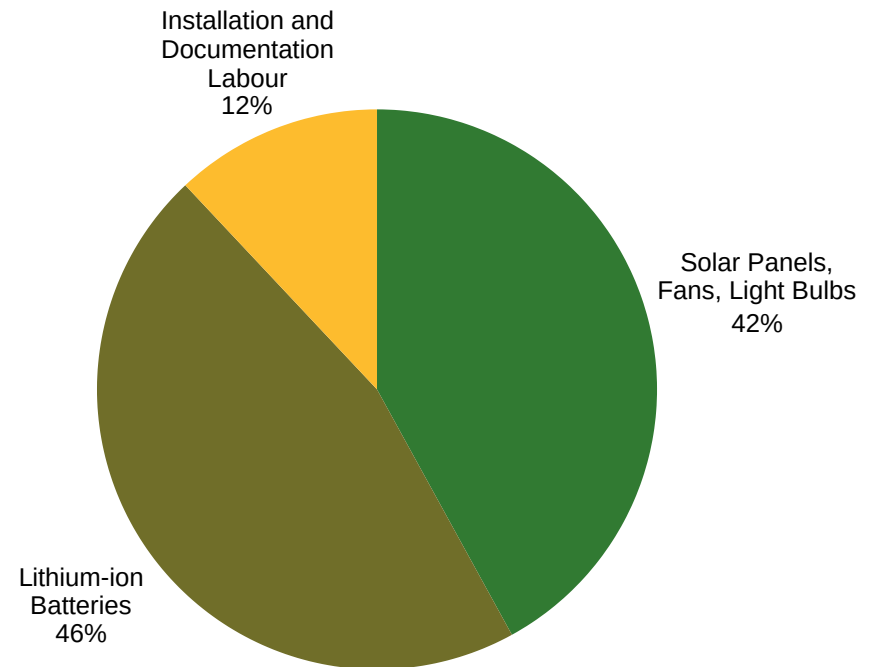

Note: Percentages are rounded to the nearest whole number

WHERE MONEY WENT

PKR 1,276,760

Total Expenses April 2025 - May 2026

- **Solar Equipment & Materials: PKR 1,121,780 (88%)**
 - i. **Solar Panels, Fans, Light Bulbs: PKR 539,280 (42%)**
 - 300W capacity panels per system
 - 12V DC fans for ventilation
 - LED household lighting
 - ii. **Lithium-ion Batteries: PKR 582,500 (46%)**
 - 10kWh capacity storage systems
 - 3–5 day backup capability
 - 24/7 electricity access
- **Installation & Documentation Labour: PKR 154,980 (12%)**
 - Certified technician installation
 - Professional system configuration
 - Quality assurance follow-up
 - Video/photo documentation for impact reporting

Note: Percentages are rounded to the nearest whole number

YEAR END FINANCIAL POSITION

SolarPak's first full year demonstrates both **financial discipline and measurable impact**. We have **raised PKR 1.276 million from various sources**: 60% from committed donors, 22% from community events, 11% from grassroots campaigns, and 7% from founder investment. This diversity proves SolarPak's model resonates across multiple stakeholder groups.

Our **spending demonstrates our continuous commitment to maximising impact**: 88% went directly to solar equipment and installation. The remaining 12% covered essential labour, technical expertise, documentation, and quality assurance. This 88/12 split shows exceptional efficiency.

With **PKR 1.276 million, we completed 24 installations serving 240+ people, generated 270 kWh of clean energy, and prevented 1,900 kg of CO2**. The average cost per installation is an **estimated PKR 53,198, delivering world-class systems with 10-year warranties and ongoing support**. Heading into 2026/27, our financial position is strong: proven model, committed donor partnerships, and efficient operations in place. We're positioned to scale to 100 installations while maintaining SolarPak's quality standards.

CLOSING REMARKS

ONE PANEL AT A TIME.

This year has proven what we've always believed: **young people can solve global problems**. We have completed 24 installations, transformed 240+ lives, and built systems that last.

But this is **just the beginning**.

Pakistan's energy crisis has not paused, or slowed down. Tariffs are increasing exponentially. Millions are still living without reliable electricity. The problem we are trying to solve is huge. But so is our **momentum**.

This next year, we are scaling up to **50+** installations. We are planning to expand into both new provinces and new countries. We are proving that the solutions to social injustice lie with empowered young people, who are committed to making the world a better place.

Our growth is tangible, and our long-term goals are very much possible. But we need **partners** who believe in young leaders like ourselves.

Will you help us build a world where everyone has access to clean electricity?

One panel at a time?
